

DecisionHPC®

PROFITABILITY

Increase profit by tracking system operational costs related to users and projects allowing improved quoting, chargebacks and revenue from your clusters.

PRODUCTIVITY

Improve time to market by using analytics to identify and improve key inefficiencies in your system utilization.

ROI

Reduce capital spend by making purchasing decisions based on a holistic view of your business requirements and available capacity.

REPORTING & ANALYTICS FOR HPC AND BIG DATA CLUSTERS

DecisionHPC is a reporting and analytics software for executives, managers, users and IT, that provides key metrics and insights that are essential to managing all types of High Performance Systems.

Do you need answers to:

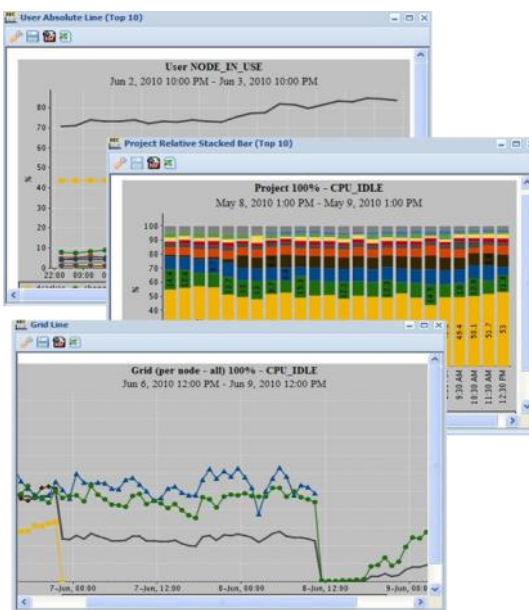

- What is my compute utilization by site and cluster?
- What is my usage by users or by application?
- How much in resources did this project use last year and at what cost?

and an accurate and timely answer is hard to get?

STANDARD REPORTING EXAMPLES

DecisionHPC Benefits

DecisionHPC is customized to the unique requirements of the customer allowing:

- Increased profitability from HPC and Big Data environments
- Improvement in HPC and Big Data systems productivity
- More informed HPC purchase decisions

DecisionHPC leads the market in providing comprehensive HPC and Big Data analytics for distributed, heterogeneous, mid- to large-scale enterprises.

"The level of information available with DecisionHPC and its customizable format has proved to be a major asset to ensuring optimum productivity and helping us realize business objectives."

Keith Ritchie, Manager, ION Geophysical
